We design, manufacture and install the very best in quality bay systems

If you’re looking for a welding bay, no matter how extensive, Tusker Industrial Safety can deliver. Our technical team will consult with you and design a system to meet your exact requirements.

We’ve been trusted by some of the UK’s most well-known organisations to deliver systems which meet your particular specifications, on time and with the minimisation of down-time being at the forefront of the planning process.

We can provide all the necessary supplementary documentation including technical drawings, risk assessments and method statements and a dedicated project manager will keep you informed at every stage of the process.

"The team at Tusker Industrial Safety worked closely with us to fully understand our requirement and deliver an excellent product. Communication was excellent at all stages - before, during and after installation to ensure that we were completely satisfied. I would highly recommend Tusker Industrial Safety".

Simon Pollard, Airedale International Air Conditioning
We are UK leaders in the design, supply and installation of welding and industrial bay systems.

From small bay systems to extensive systems for large facilities, we can design a bay system to exactly meet your requirements. With a range of components available, our bays can be suited to both your space and your application.

Our bays can include the following features:

- Ceiling, floor or wall mounted systems, or a combination
- Solid, PVC or strip curtain walls
- Sliding systems
- Retractable systems
- Sonic properties
- Bespoke internal elements
- such as welding benches
- Custom-designed elements
TUSKER WELDING AND INDUSTRIAL BAY SYSTEMS

Heavy duty track system options
We have several track options for your bay system and we can advise on the best solution to fit with your requirement. Our track options can be combined to create a flexible solution.

Fixed Track
The top track is fixed directly to the pre-drilled and threaded stanchion uprights. The track can be fixed directly to vertical surfaces without any special brackets.

Overhead Track
A heavy duty track system designed to be fixed directly to ceilings, fascias, or suspended from structural beams, enabling the workspace to be clear of steel upright supports.

Continuous Track
Designed for curtain and strip to hang and slide around the track without being hampered by the uprights. Horizontal 90 degree bends available to form booths and hangers for single and double track systems.

Retractable Reel
Self-retracting curtain hanger which overcomes the problems arising from access to protected welding areas. When not in use, the curtains are retracted and suspended from a pivoting arm which rotates through 180 degrees. Suitable for widths up to 8 metres.

Fixed Strip Curtain System
The simple design enables strip to be easily hooked and unhooked for ease of cleaning or replacement. Extremely simple to install and allows for strip overlap. A very heavy duty version is available and essential where forklift access is required. Available in galvanised steel or industrial applications and stainless steel for the food industry.

Sliding Curtain System
Our sliding systems enable easy to access to chosen areas of your welding bay. With a seamless design, you can easily retract sections of your bay.
Sonic Bay Systems
Tusker sonic welding bays can substantially reduce noise pollution, enabling companies to comply with necessary sound level guidelines.

The soundproofing within our sonic bays establish a better working environment for employees and encourage increased production and performance and are particularly relevant in organisations such as industrial manufacturing, government agencies and educational settings.
